

Our Team

StreamHPC is one of the best known companies in GPU-computing (OpenCL/CUDA), but we are also very active in embedded development, algorithm-design and technologies like graphics (OpenGL/VULKAN), Machine Learning, and HPC (OpenMP/MPI).

Core team

The full company size is over 20 highly skilled developers and performance engineers. The core team deals with new directions/markets, consultancy projects and especially architecture-designs.

Each employee regularly shares their experience within the core team and checks the work of colleagues, to keep the standards high. This results in faster deliveries with higher quality of code, for which we've been complimented often.

Vincent Hindriksen

Founder, customer relations and sales.

Adel Johar

C, HPC on GPU, and Machine Learning.

Anton Gorenko

HPC on CPU, HPC on GPU, Code-quality and Low-level optimizations.

Jakub Szuppe

HPC on CPU, HPC on GPU, and Code-maintainability.

Hire the experts
