

## Altera

Altera makes FPGAs:

- Cyclone (smallest, low-end)
- Arria ('V' and '10' series available now)
- Stratix ('V' series available now, '10' in 2017)

Each FPGA can optionally have a built-in ARM CPU (SoC). With the acquisition of Altera by Intel, FPGAs will also get combined with a Xeon.

For HPC the Arria 10 is currently used most.

For low-latency all sizes
